

RISTEK HACKATHON 2026 · GRAND FINAL

Talk-Active

Bring the evaluator's rubric.
Leave with the sentence you still need.

PROBLEM

Students know their material. The high-stakes moment asks them to prove it

Talk-Active is deliberately bounded to the pitch, defense, and interview—not general speaking ability.

5.38%

**unemployment rate among
university graduates**

*Context—not a claim that rehearsal
alone explains unemployment.*

The moment that breaks

01

The rubric exists

Criteria are published before the evaluation.

02

Practice is still blind

Students repeat a speech without checking explicit evidence.

03

Feedback arrives too late

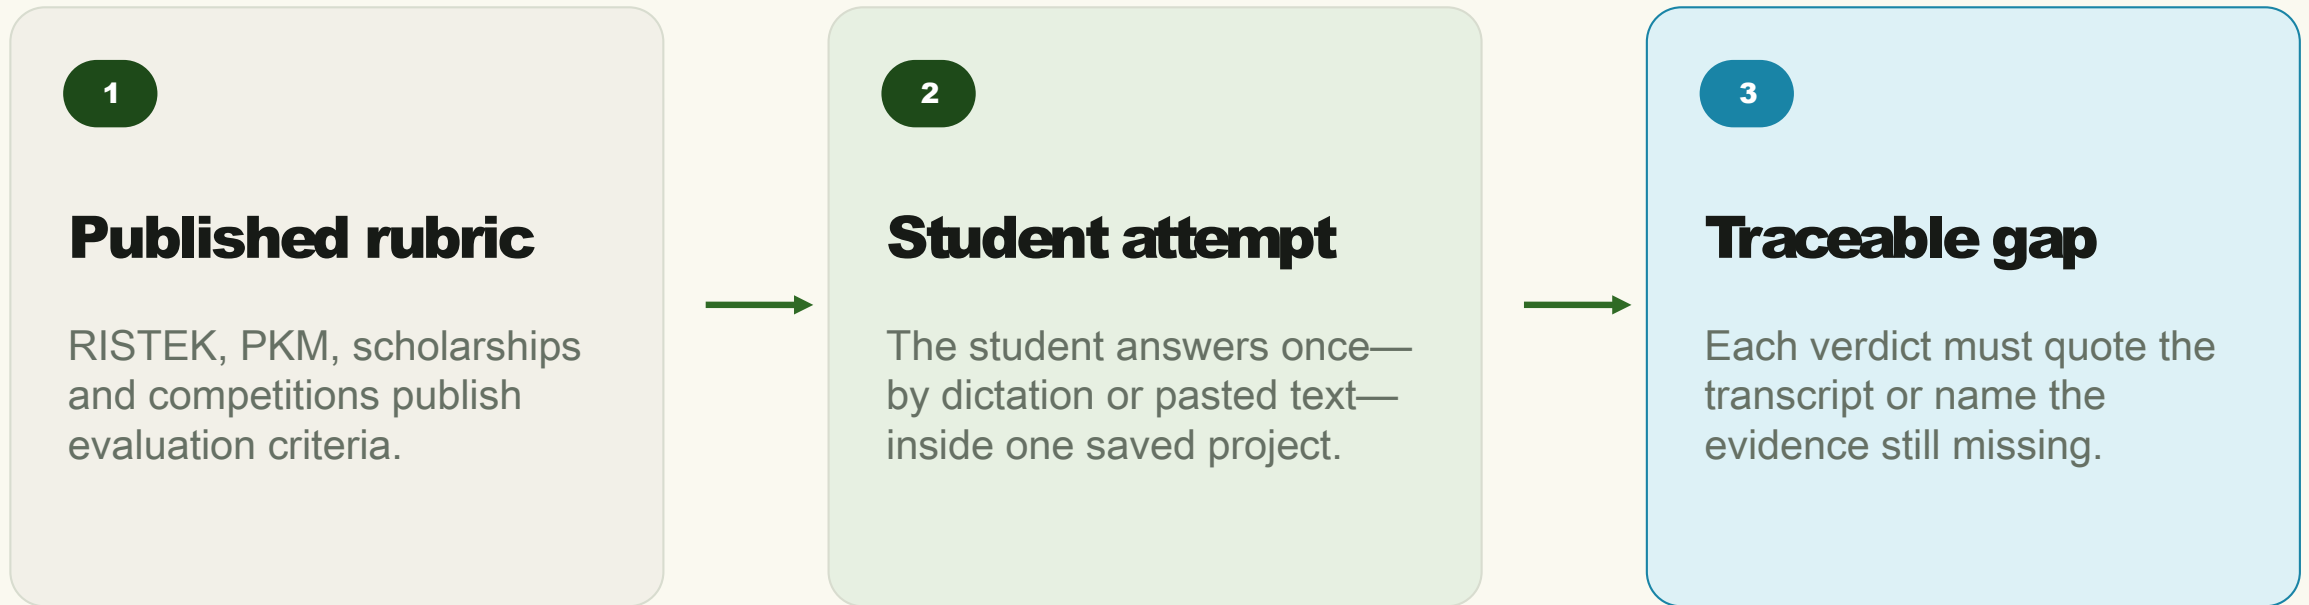

The hardest question appears only after a judge asks it.

Source: BPS, November 2025 labour-force release (education breakdown in official release materials). [↗](#)

INSIGHT

The evaluator has already told us what “good” means.

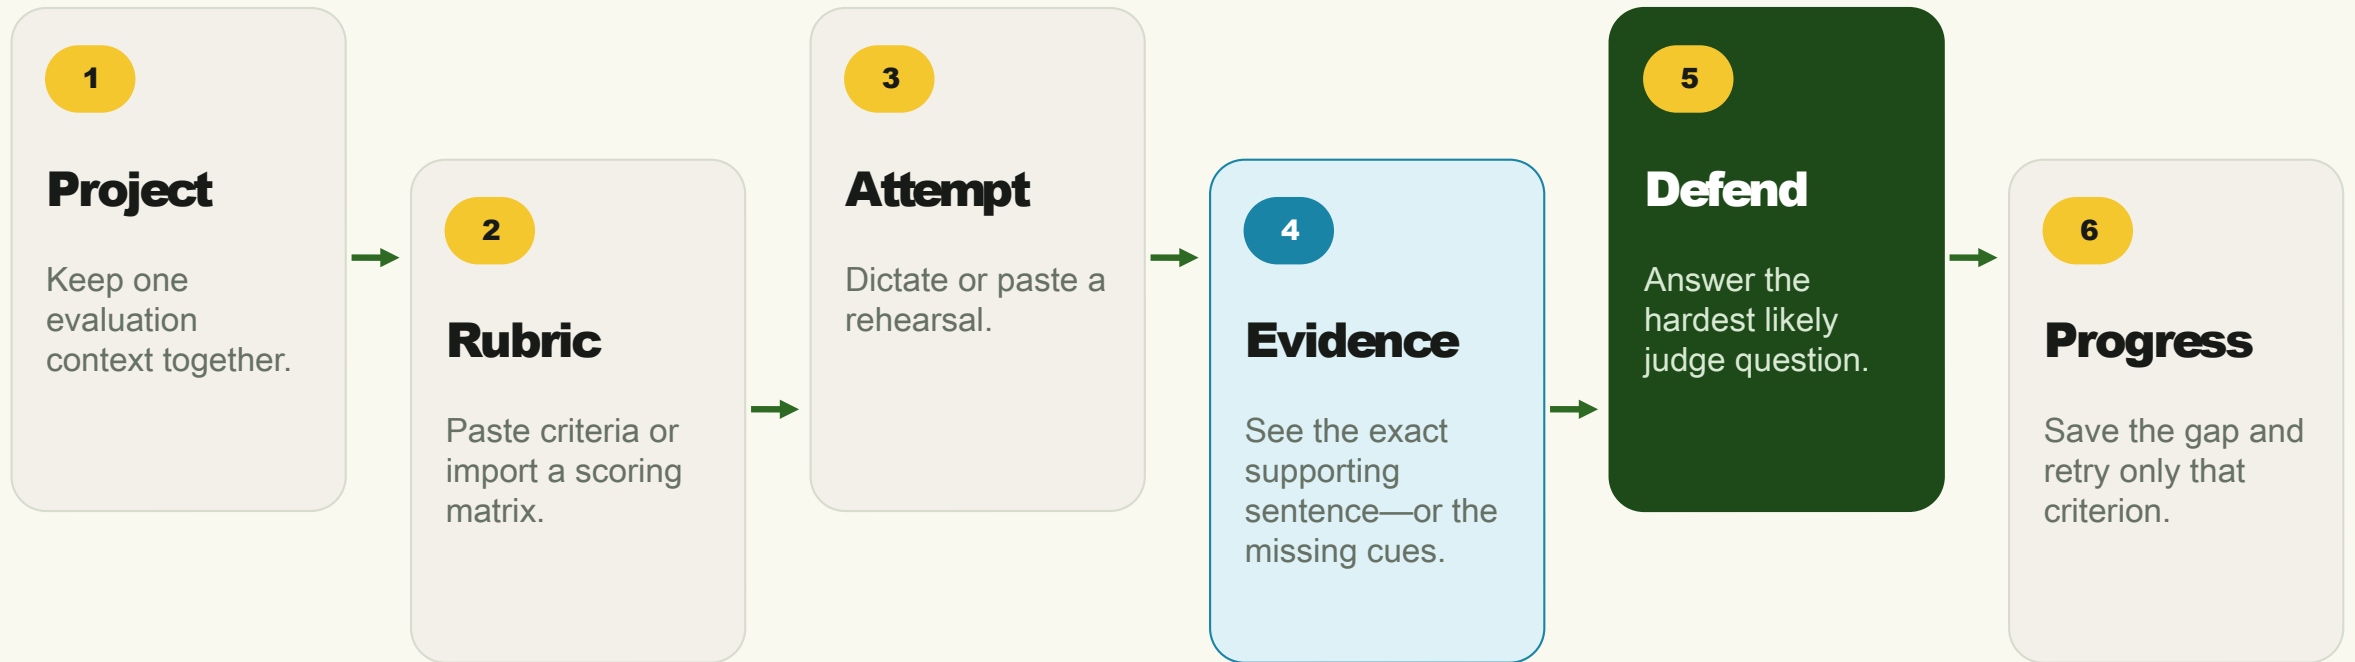

The missing step is turning a published rubric into a personal rehearsal loop.

Not a confidence score. Not body-language scoring. Not a promise that the model “understands you.”

One loop: from rubric to the hardest next question.

Everything else is supporting context.

DIFFERENTIATING MOMENT

The evidence card points at the student's own words; the next drill targets the weakest criterion.

LIVE PRODUCT

Let's use your rubric.

Paste → rehearse → inspect the quote → answer the judge

01

Import

RISTEK finals criteria

02

Attempt

one pitch answer

03

Defend

the hardest gap

If the network fails, the same loop continues with deterministic cue matching on the laptop.

A verdict has to point somewhere.

The review names the weakest criterion and turns it into a realistic judge question.

REFUSAL CONTRACT

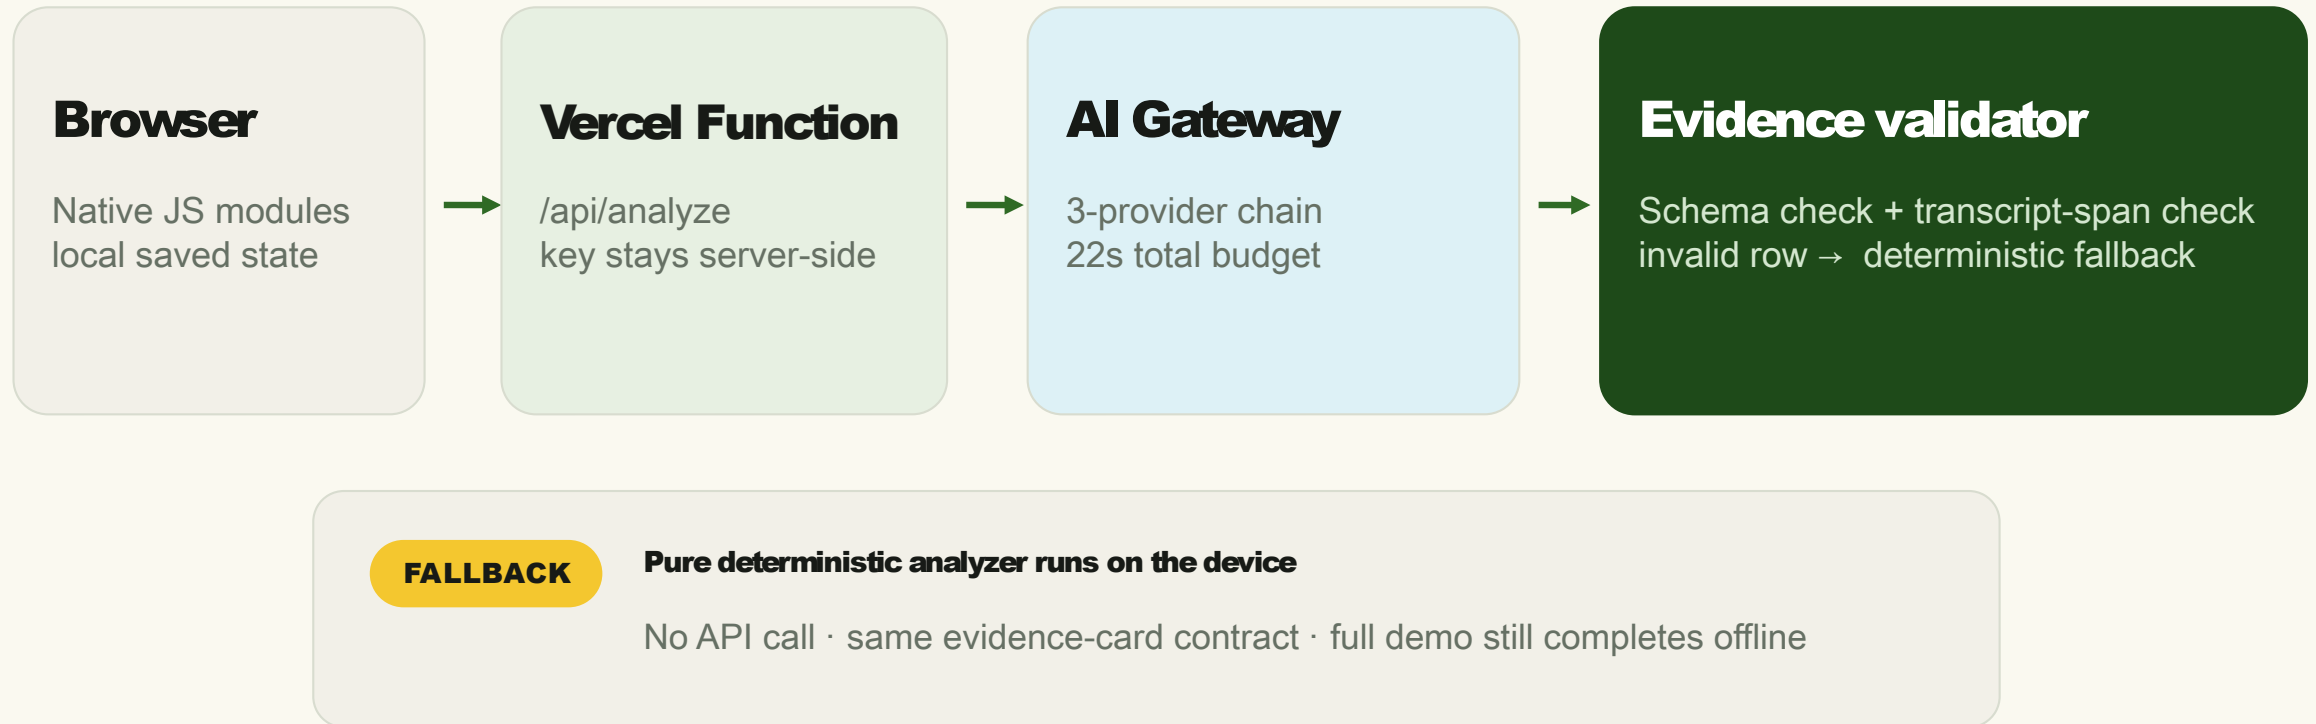

No quote?
No supporting
verdict.

If a model-generated span cannot be found in the student's transcript, that row is discarded and falls back visibly.

TRACEABLE BY DESIGN

Network-assisted when available. Deterministic when it is not

The browser receives one result shape either way, so failure never breaks the rehearsal loop.

Raw audio is not persisted. Production expansion requires consent, expiry and deletion.

DIFFERENTIATION

We do not win by pretending custom rubrics do not exist

We win by centering the evaluator's published rubric and enforcing traceable evidence for students.

GENERIC DELIVERY COACH

How you sounded

Pace, fillers, delivery and generic practice feedback.

ENTERPRISE CUSTOM GOALS

How the organisation scores

Yoodli lets enterprise organisations import scorecards and rubrics.

TALK-ACTIVE

What the evaluator will decide

A student loads the published judging rubric; every supporting verdict must cite their words.

HONEST POSITION

Competition pitching is the beachhead; thesis-defense and scholarship rehearsal already have Indonesian competitors.

Source: Yoodli Support, "Creating Custom Goals" (Enterprise); Indonesian competitor research in docs/MENTORING/market-validation-research.md. [↗](#)

Built to survive the demo—and the bill.

Hard limits make the product calmer on stage and safer after it.

Public production · API key server-side
· per-client rate limit · offline fallback

AI SPEND CONTROL

\$5 hard cap

no auto-refresh · alerts at 50 / 75 / 100%

\$0.0027–\$0.006 estimated per semantic analysis

≈ 1,250 typical analyses within the cap

Identical semantic requests replay from cache at \$0 model cost.

Internal evidence: npm check and production verification, 12 Aug 2026. Cost is a token-based planning estimate; actual vendor billing varies.

Today, we prove the evidence loop.

Next, we earn the right to scale it.

SHIPPED NOW

- ✓ Public-rubric projects
- ✓ Pasted or dictated attempts
- ✓ Traceable evidence + visible fallback
- ✓ Saved progress on the device

POST-HACKATHON

- 01 10-student outcome pilot
- 02 Measured rubric-import accuracy
- 03 Consent, expiry and deletion controls
- 04 Institutional rubric partnerships

Give us one criterion. We will show the sentence—or refuse the verdict.
